

ECOSIT® ShelfScan

The easy and efficient solution for ordering and stockkeeping of fasteners

BOLLOFF

The ECOSIT® ShelfScan system

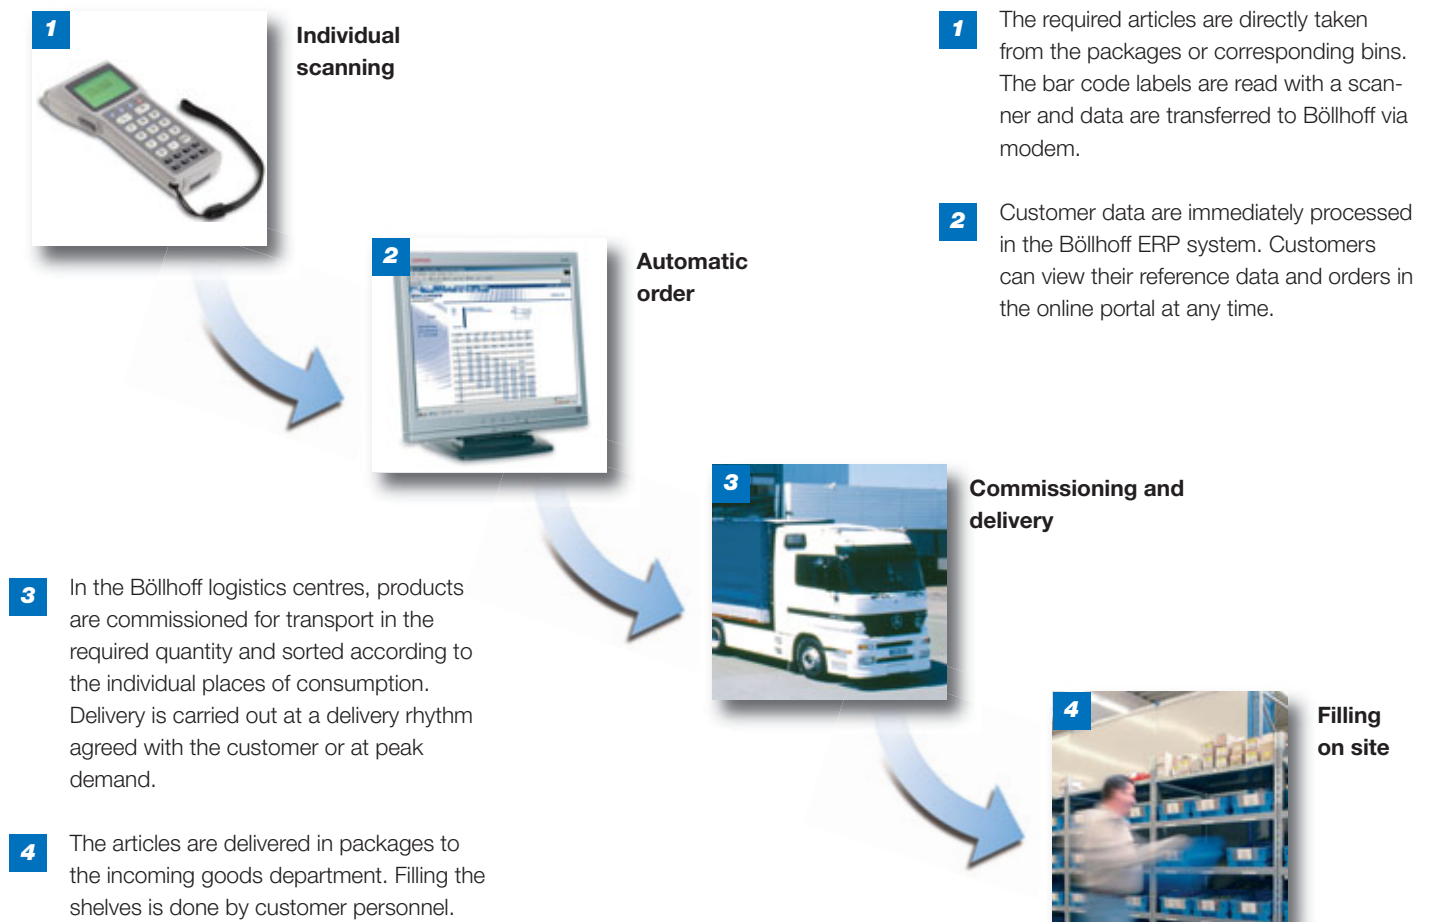

An easy and efficient solution for procurement and stockkeeping

The ShelfScan system is a solution for all customers who wish to considerably simplify procurement and stockkeeping of fasteners. Many process steps of a "conventional" ordering process are no longer necessary with the ShelfScan system.

On the shelves, fasteners are systematically and orderly stored in bins. This does not only contribute to a good visual appearance but also makes required products very easy to find. All personnel can concentrate on their core responsibilities without wasting time in inefficient processes.

4 steps to optimal stockkeeping

Functional principle:

Every article on the shelf has an individual bar code. The responsible person in the customer company can at any time and according to his or her own judgement trigger an order by simply scanning the bar codes on the shelf. Data transfer is fast and easy. Data are automatically read out of the scanner and transferred to Böllhoff. An order is immediately generated in the Böllhoff system, products are commissioned and delivered with exactly defined arrival times.

Benefits of the ECOSIT® ShelfScan system:

- Quick and easy shelf installation
- Systematic and well arranged stockkeeping
- Reduced stock and safety stock
- High supply guarantee due to fixed delivery cycles
- Small space requirements
- Peak demand delivery at short notice
- High flexibility and process reliability
- Online controlling of order processes

Michael Renner,
managing director of Philipp Hörz
in Weißenhorn, Germany:

“This is truly a procurement system. Just like I had imagined. This was my first reaction after I had seen the new ShelfScan system we installed in cooperation with the Böllhoff company.

Now, we have a systematic and well arranged C-parts store. Each of the total of 600 different fasteners has its own place. Thanks to that, we could considerably reduce search work. This saves us a lot of time and costs.

There is now way the order process could be easier or quicker. We scan the bins and transfer data to Böllhoff. With the next delivery we receive the ordered articles.

This easy and practicable procurement system should have been installed in our company long ago.”
